Claim 11 is objected to as containing a minor grammatical error (“densely arrangement”).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hultmark et al.

Note heat dissipating member 18 with holes 26 defined therein, and heat conducting members 20 spacing member 18 from base 14.

Claims 2-5, 7-12, and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Feenstra.

Note in particular the Figs. 4 and 5 embodiments. The Fig. 4 embodiment is structurally very similar to applicant’s disclosed embodiment (Fig. 2), with the large (6.3mm) diameter hole 110 forming a large opening exposing the lower end of tube 114 to ambient; the remaining semicylindrical portion adjacent the base 102 corresponds to the claimed “heat conducting member” or integrally formed “conducting members”. Regarding claims 3-5, note the Fig. 5 embodiment, and note that Hultmark et al. indicate that flange 220 which extends perpendicular to the pipe (to thus extend parallel to the module cover of a component) can be replaced by tabs (lines 40-47 of column

4). The disclosed module cover (to which flanges or tabs 220 are directly mounted) would read on the claimed "base". Regarding claim 10, the foundation 106 of tubes 104 provided with holes 110 of the Figs. 1-3 embodiment is readable on the claimed "conductive members". Clearly, both the upper and the lower end of tubes 104 are exposed to "an exterior" (ambient) for chimney effect cooling, the lower end by virtue of holes 110.

Claims 6 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The remaining references show various tubular pin fin heat sink designs.
